## **Awarded Projects Interview**

---

<b>Awarded Project</b>	<b>AgingWell</b>
<b>Company name</b>	<b>ShieldME</b>

# AgingWell

Closing the gap in elderly care with AI-powered patient management, monitoring and decision support system.

## 1. What is the company's business activity?

- We provide nursing homes with insights on the elderly in their care.

## 2. What is the AgingWell project?

- It is our AI-powered patient management, monitoring and decision support system, which we have developed towards our pilot ready solution in the AgingWell project.

## 3. How did the idea come about?

- The idea came about after thorough research of user needs in elderly care, in institutional elderly care and home care, in addition to deep investigation of existing technologies and solutions - revealing a need for both a better software solution and a smarter sensor.

## 4. Who are the core partners of the project?

- We have collaborated with partners in multiple fields. This includes Instituto Pedro Nunes, Whitesmith, Norway Health Tech, Industrial designer Anders Lilleby, and Inventas.

## 5. How did this collaboration between the partners arise?

- One of the great things with Cross4Health is their depth of consultants dedicated to helping healthcare start-ups succeed. They helped facilitate and fund partnerships with Norway Health Tech. They gave us additional resources that enabled us to start our collaboration with IPN, Whitesmith, Inventas, Diakonhjemmet and Industrial designer Anders Lilleby.

## 6. How did you hear about the Cross4Health project?

- As a member of Aleap we have access to different resources, including Norway Health Tech and one of the projects they manage, Cross4Health.

## 7. What is the current status of the project?

- The Cross4Health project is finished with fantastic results. This has enabled us to move into a pilot phase.

## 8. What are the next steps?

- The next step is to develop the complete solution based on the results of the pilot, which will allow us to finish our MVP.

## 9. How Cross4health can support the development of your project?

- To date, Cross4health has been an invaluable contribution to creating our AI-powered patient management, monitoring and decision support system. We look forward to the opportunity to have Cross4Health help us with our presence at Vitalis in Gothenburg this Spring.

## 10. Would you recommend Cross4Health to other companies?

- Absolutely. It has been a great program to be part of, with a lot of hands-on support, and the staff has been amazing.
